

Hazardous Materials Technician HazMAT24

HazMAT24 is our 24-hour Hazardous Materials Technician Level Course.

A chemical release requires a decisive and proactive response to save lives, stabilize the incident and prevent harm to property and the environment. For these dynamic events, your organization needs a fully prepared HazMat unit; meaning certified Hazardous Materials Technician Level trained responders.

Health and Safety Sciences' **HazMAT24** training teams are high-speed real world responders that have hundreds of responses under their belts. Our trainers come from fire service, law enforcement, emergency management and military backgrounds.

Health and Safety Sciences' interactive training techniques are designed to immerse your team members into the world of hazmat response. By using comprehensive, hands-on instructional methods, HSS trains your emergency response team members using likely spill scenarios at your facilities. To supplement class lectures, HSS's **HazMAT24** instructors introduce problem-solving case studies to further engage trainees. Each team member dons personal protective equipment and functions under the Incident Management System to perform mission critical skills. This course involves strenuous physical activity in a high-pressure environments – HSS is proud to boast that we build responders one skill at a time.

If your organization has special hazards don't hesitate to ask our training cadre for additional modules. HSS offers modules in Weapons of Mass Destruction, Hazmat Marine Operations, Contaminated Diving Operations, and Explosives/Ordinance/Disposal Operations.

Health and Safety Sciences' **HazMAT24** program is fully mobile and can be delivered at any location your organization requests.
