

Rescue 3 International Courses

Rescue 3 International was founded in 1979 after a California search and rescue team nearly lost one of its own during a water rescue. Nearly 30 years later their mission remains the same: to provide flood, water, and rope rescue training to individuals and organizations with an emphasis on training rescuers to avoid becoming victims. As a result, Rescue 3 has become the recognized leader in water and flood rescue, training over 150,000 students throughout the US and 32 foreign countries.

One thing that sets Rescue 3 International apart is their dedication to providing students with practical, real world experience. To this end, all of Rescue 3's instructors are professionals working in the disciplines they teach. Their instructors include paramedics, firefighters, law enforcement officers, and search and rescue team members, as well as river guides and military personnel. While Rescue 3's instructors come from a wide variety of fields, they all share a passion for saving lives and teaching others to do the same.

Proven Curriculum & Global Standards

The Rescue 3 curriculum was developed by leaders in the field of technical rescue and is constantly updated and fine-tuned by a cadre of over 700 instructors in 32 different countries, refining out approach until to ensure it is the absolute best in business. The courses have been independently audited and are compliant with the NFPA 1670 standard for technical rescue in high risk environments including swiftwater, ice and rope rescue.

Unparalleled Documentation

Court cases have shown time and time again that training isn't worth much if you can't prove you did it, so we provide extensive documentation of each student's training. Each student is assigned a certification number and skill sheet (training record) that is entered into a database maintained by Rescue 3 International. The training record can be accessed at any time with just a phone call or e-mail, quoting the individual certification number or person's name. so that they can access their record at any time in the future, for employment or legal reasons. The skill sheet lists the specific skills and knowledge taught, the relevant NFPA standard, and whether the student performed or observed each skill. This high-level of record keeping is one of the many ways our approach is unmatched by other training companies.
